PROFESSIONAL SUMMARY

Third-year B.Tech (AI & ML) student with a proven record of architecting and shipping production-grade Full-Stack AI systems. Runner-Up at IIIT Delhi Hackathon and 2nd Place at IIT Roorkee Development Competition, both judged on technical depth, scalability, and UX. Delivered 6 merged open-source pull requests, achieved Codeforces 1000+ rating, and solved 190+ problems. Hands-on expertise spanning PyTorch, Hugging Face, RAG pipelines, dual-LLM architectures (OpenAI, Gemini, Groq), vector search at scale, and real-time government API integrations — all shipped as live, user-facing products.

TECHNICAL SKILLS

Languages	Python · JavaScript (ES2022) · TypeScript · HTML5 · CSS3
Frameworks	React · Next.js · Node.js · Express.js · FastAPI
AI / ML	PyTorch · Scikit-learn · Hugging Face · Pandas · NumPy · LangChain · RAG Pipelines
LLM & Vector	Groq (Llama 3) · OpenAI API · Gemini API · Ollama · Pinecone · Qdrant · Vector Search
Databases & ORM	PostgreSQL · MongoDB · Prisma ORM
Dev Tools	Git · GitHub Actions (CI/CD) · Docker · REST APIs · Figma

EXPERIENCE

AI/ML Intern — Vetifi

Jun 2026 – Present

- Developing AI-powered veterinary solutions using LLMs, RAG pipelines, and modern AI frameworks.
- Contributing to backend development using FastAPI, Python, and vector databases.
- Building and optimizing AI workflows for information retrieval and domain-specific question answering.
- Collaborating with the founding team on production-grade AI systems and agentic workflows.

PROJECTS

FarmSathi — AI Agricultural Advisory Platform ([Github](#)) ([Demo](#))

April 2026

Stack: FastAPI · React · Groq (Llama 3) · Pinecone · RAG · REST APIs

- Built an AI-powered agricultural advisory platform integrating LLMs, RAG pipelines, and live government data APIs to deliver context-aware insights for smallholder farmers.
- Implemented a semantic RAG-based chat system using Groq (Llama 3) and Pinecone vector search, enabling accurate, low-latency responses grounded in real agricultural data.
- Developed a crop disease diagnosis engine mapping user-reported symptoms to structured, expert-aligned treatment recommendations, improving decision support for farmers.
- Integrated real-time data pipelines aggregating mandi prices, weather forecasts, and government schemes into a unified, farmer-facing dashboard.
- Architected a scalable full-stack system using FastAPI, React, and Qdrant/Pinecone with modular services, supporting extensibility across multiple agricultural use cases.

NyayaSetu — AI Legal Research Assistant ([Github](#)) ([Demo](#))

March 2026

Stack: FastAPI · React · Qdrant · Groq · Ollama · Dual-LLM Architecture

- Built an AI-powered legal assistant for Indian courts enabling natural language case search, automated document drafting, and legal Q & A across thousands of court judgments.
- Designed and implemented a citation-grounded RAG pipeline using Qdrant vector search, ensuring responses are backed by real legal sources and eliminating hallucinated outputs.
- Developed an automated draft generation system leveraging 1,800+ legal templates, significantly reducing document preparation time from hours to minutes.
- Engineered a dual retrieval architecture integrating Groq API (cloud LLM inference) and Ollama (local embeddings), enabling seamless switching between online and fully offline modes.
- Architected a scalable full-stack system using FastAPI, React, and Qdrant with modular service layers, enabling easy extension to new legal domains and datasets.

AWARDS & ACHIEVEMENTS

Runner-Up — IIIT Delhi Hackathon

Indraprastha Institute of Information Technology Delhi · April 2026

Built and shipped a complete full-stack AI solution within 24 hours. Judged on technical depth, UX polish, and production scalability.

2nd Place — IIT Roorkee Development Competition (Certificate)

IIT Roorkee · May 2025

Secured 2nd place among national-level participants; evaluated on UI design excellence, code quality, and cross-device responsiveness.

6 Merged Pull Requests — Open Source Contribution

Multiple Public Repositories · 2024 – 2026

Delivered production bug fixes and feature additions across open-source projects; all PRs reviewed, approved, and merged by maintainers.

EDUCATION

Bachelor of Technology — Artificial Intelligence & Machine Learning (B.Tech AI/ML)

Newton School of Technology, Rishihood University · Sonipat · 2024 – 2028 · 3rd Year · Relevant coursework: Data Structures · Machine Learning · Systems Design

Intermediate — Class XII

Minerva Sr. Sec. School · 2022 – 2023 · 83.4%

Matriculation — Class X

Minerva Sr. Sec. School · 2021 – 2022 · 92.3%

LEADERSHIP & ACTIVITIES

Organizing Committee Member — Neutron Tech Fest · Newton School of Technology · April 2025

Coordinated technical workshops, managed 200+ participants, and led end-to-end event logistics for a 2-day inter-college technology festival.
